

## SYNTEEN "SF" SERIES SOIL REINFORCEMENT GEOGRID

Synteen SF Geogrids are composed of high molecular weight, high tenacity multifilament polyester yarns that are woven into a stable network placed under tension. The high strength polyester yarns are coated with PVC. Synteen SF Geogrids are inert to biological degradation and are resistant to naturally encountered chemicals, alkalis and acids. Synteen SF Geogrids are typically used for soil reinforcement applications such as retaining walls, steepened slopes, embankments, sub-grade stabilization, and embankments over soft soils, as well as waste containment applications.
