TYPAR® BIOBARRIER is a long-term vertical root control system that consists of time-release nodules of trifluralin herbicide permanently bonded onto a permeable geotextile fabric. When strategically placed into the soil, it prevents damage from root encroachment into valuable surfaces long-term (minimum of 15 years) without harming trees or nearby landscaping.

TYPAR® BIOBARRIER is also a long-term horizontal weed control system. Placed on the ground like a landscape fabric and covered with up to two inches of stone, mulch or other cover material, the trifluralin in BioBarrier is slowly released from the nodules. The constant release of trifluralin from BioBarrier creates a narrow (approx. 2 inches) zone on either side of the fabric. Bio Barrier is effective because the zone of trifluralin extends into the stone, mulch or other cover material. Since weeds are unable to develop a strong root system in the presence of trifluralin, they are unable to survive when their roots reach the zone. Allow 4-6" overlap at seams. BioBarrier is more effective long-term (minimum 10 years) than any landscape fabric available.
